This visualization technique for displaying multiple dimensions has been developed by a research group at the University of Athens. They are looking for feedback from colleagues in the field on its functionality and utility.

The image shown is a visual representation of a multi-dimensional space from the imagined perspective of the data analyst.

[You can test run the application](#) and tell us how it feels to perceive up to 20 dimensions.

All feedback will be passed on to the group at the University of Athens

## About the Data Science Foundation

The Data Science Foundation is a professional body representing the interests of the Data Science Industry. Its membership consists of suppliers who offer a range of big data analytical and technical services and companies and individuals with an interest in the commercial advantages that can be gained from big data. The organisation aims to raise the profile of this developing industry, to educate people about the benefits of knowledge based decision making and to encourage firms to start using big data techniques.
